SOFTNIX LOGGER

# CYBOT

**Your Intelligent IT & Cyber Assistant**

*Secure. Compliant. Intelligent. Automated.*

Softnix Logger CYBOT is an **intelligent IT & cyber-security assistant** built on Agentic AI that runs entirely inside your organization (100% On-Premise). It unifies standards-certified log management (NTS 4003.1-2560), vulnerability assessment, proactive monitoring and IT asset management into a single appliance — and lets your team simply ask, in natural language, to get answers and actions instantly.

**7,000+**

Events / sec (EPS)  
Unlimited Devices & Volume

**100%**

On-Premise processing  
data never leaves your network

**Agentic**

AI that understands, plans  
and acts on its own

**7 Standards**

PDPA · ISO 27001 · NIST  
PCI-DSS · GDPR · Cyber Act

PRODUCT OVERVIEW

From Tool-Based IT to AI-Assisted IT

Organizations face an overwhelming volume of logs and security events, while IT teams remain time-constrained. **CYBOT** embodies the shift “**From Tool-Based IT to AI-Assisted IT**” — acting as an AI Buddy that understands context, reasons through problems, and takes action on your behalf, always under human oversight (Human-in-the-Loop).

What CYBOT Can Do

- **Collect & Observe** — continuously gather and watch the IT environment, logs and threats
- **Understand Context** — comprehend context from logs, monitoring, threat intelligence and IT assets
- **Plan & Reason** — analyze, plan the steps, and provide reasoning before deciding
- **Take Action** — execute the plan autonomously, requesting approval from the operator when needed

Who It Is Built For

- **IT Managers** — see overall system health and risk on one screen, and offload routine work
- **System Administrators** — query logs and issue commands in plain language, no complex syntax
- **IT System Integrators** — an All-in-One solution ready to present, easy to deploy, standards-complete
- **Security Teams** — a built-in security advisor with ready-to-use compliance reporting

4 Intelligence — Four Capabilities in a Single Appliance

01

IT Inventory

Register devices and software, with alerts when a License or MA is about to expire

02

Security

Assess security posture and scan for vulnerabilities, with remediation guidance — a professional-grade advisor

03

Log Compliance

Store logs to the NTS 4003.1-2560 standard, supporting the Computer Act, PDPA and ISO 27001

04

Proactive Monitor

Observe the IT environment with instant alerts — no command required — plus clear remediation guidance

One Appliance, One Trademark, Zero Integration Overhead

The hardware unifies both the log-management engine and the Agentic AI processing under a single product line — reducing complexity and delivering the best possible compatibility, all processed and stored on-premise.

AGENTIC AI ASSISTANT

## Converse, Command & Reason in Natural Language

Users simply “ask” in plain language; CYBOT turns it into search, analysis, planning and action automatically — all processed inside the organization, with nothing sent to the Cloud.

### NL Understanding

Interprets Thai/English questions with no technical syntax

### Thinking & Reasoning

Analyzes context, plans steps and reasons before acting

### NL Log Query

Ask about logs in plain language, get instant results

### Autonomous Task

Executes plans automatically without extra prompts

Asking “what looks unusual today?” — CYBOT detects a traffic anomaly with a real-time chart and Z-Score

An in-depth analysis summary, identifying risk level (High Risk), root cause and the behavior detected

## SECURITY ASSESSMENT & THREAT DETECTION

# Scan Vulnerabilities, Catch Threats, Advise In-House

CYBOT works like a cyber-security advisor on duty 24/7 — continuously scanning for vulnerabilities, prioritizing risk, and proposing remediation you can act on immediately.

### Vulnerability Scan

Automated scanning across devices, servers and software

### Remediation Guidance

Clear fix guidance with a priority order

### Security Advisory

Built-in advisor to international standards

### Risk Prioritization

Ranks remediation by severity and impact

Threat Detection

| SOURCE                  | TARGET       | THREAT                   | SEVERITY | ACTION  |
|-------------------------|--------------|--------------------------|----------|---------|
| 192.168.120.64 internal | 13.229.88.78 | W32/WebShell.Pitrvirus   | CRITICAL | blocked |
| 192.168.120.64 internal | 13.229.88.78 | PHP/Rst.CO!tr.bdrvirus   | CRITICAL | blocked |
| 192.168.120.64 internal | 13.229.88.78 | Java/Agent.6QSVFXtrvirus | CRITICAL | blocked |

Threat Detection — classifies IDS/IPS, Vertical/Horizontal Scan and Brute Force, with a “blocked” status and source attribution

Task Control Room

0 running, 21 recent, 1 schedulers

ALL QUIET — nothing running right now.

RECENT 21

- Security scan workflow (SUCCESS) 2d ago
- Security scan workflow (SUCCESS) 02/07/2026
- Create SNMP monitoring (SUCCESS) 01/07/2026
- Security scan workflow (SUCCESS) 25/06/2026

SCHEDULERS 1

- Hourly Vulnerability Scan: 192.168.10.51 (PAUSED) 24/06/2026

Automated Security Scan Workflow — runs step by step and requests consent before taking real action

## IT INVENTORY & PROACTIVE MONITORING

# Manage IT Assets & Watch Systems Proactively

### IT Inventory & Asset

- Registry of hardware, software, License and MA
- Add / edit / query assets by chatting with the AI
- Bulk import large volumes via CSV / Excel
- License & MA expiry alerts via Email / Line

### Proactive Monitoring & Alert

- Real-time CPU, RAM, Storage and Services tracking
- SNMP / ICMP with per-interface FortiGate profiles
- Unlimited tracking rules with flexible conditions
- Instant alerts via Email and Line Application

Inventory Workspace — a CI registry with Active / Maintenance / Critical status, tags and device relationships

Monitor Command Surface — per-interface bandwidth graphs (FortiGate profile) with Healthy / Warning status and uptime

## LOG MANAGEMENT & ANALYTICS

# Log Retention Certified to NTS 4003.1-2560

The core log-management engine is certified to the “Computer Traffic Data Retention System” standard NTS 4003.1-2560 — supporting high volumes while preserving full data integrity.

### Syslog Protocol

Receive and send logs over UDP, TCP and encrypted TLS for secure transport

### Log Integrity

Apply Hashing with MD5 and SHA-256 to verify the integrity of raw logs

### Retention Policy

Define legally-compliant retention periods, separated by log type and channel

### Performance & Licensing

- Processes no fewer than **7,000 EPS** with no data loss
- Unlimited Devices** license — no cap on the number of log sources
- Unlimited Daily Volume** license — no cap on data volume per day
- Supports **Log Archiving** for long-term retention and retrieval

### Query & Analytics

- Flexible search — date range, channel, host, keyword, specific field
- Advanced operators — = , != , AND , OR
- Supports Wildcard (\*, ?) and Regular Expression
- Save and reuse queries, with full search history

### Built-in Log Parser

Auto-parses KV, CSV, GROK, JSON directly in the Web UI — no extra software to install

### Log Forwarding & SIEM

Create filters to forward logs by condition to a Syslog Server or SIEM over TCP/UDP

### Secure Export

Encrypt raw log data before export, with Hashing to guarantee integrity

### Dashboard & Reporting

A real-time Overview Dashboard shows CPU, RAM, Services, Storage, active users, hourly EPS and the last log-update time — with alerts when no logs arrive within a defined window — and exports reports in multiple formats: PDF, CSV, Excel.

COMPLIANCE & GOVERNANCE

Audit Events in Line With Key Standards

CYBOT maps log data to the requirements of major laws and standards, complete with a compliance rationale for each control and recommendations for improvement.

- PDPA
- Cybersecurity Act
- ISO 27001
- NTS 4003.1-2560
- NIST CSF
- PCI-DSS
- GDPR
- Computer Act

CyBOT

Analyzed

ได้เลยครับ ผมจะทำการ Mapping ข้อมูล Log เข้ากับ มาตราสำคัญของ พ.ร.บ.คุ้มครองข้อมูลส่วนบุคคล (PDPA) เพื่อให้เห็นภาพชัดเจนขึ้นว่าในเชิงเทคนิค เราทำสิ่งใด Log เหล่านี้เพื่อตอบสนองต่อข้อกำหนดทางกฎหมายข้อใดครับ

**⚠️ หมายเหตุ:** ผมเป็นผู้เชี่ยวชาญด้าน IT และระบบความปลอดภัย ข้อมูลนี้เป็นวิเคราะห์ในมุมมองของการจัดการระบบ (Technical Compliance) เพื่อสนับสนุนการปฏิบัติตามกฎหมาย ไม่ใช่คำแนะนำทางกฎหมายโดยตรง หากต้องการความถูกต้องแม่นยำสูงสุดสำหรับเอกสารทางกฎหมาย ควรปรึกษานักกฎหมายหรือ DPO ขององค์กรประกอบด้วยครับ

**ตาราง Mapping Log กับมาตราใน PDPA**

| หัวข้อการควบคุม (Control Topic)                 | แหล่งข้อมูล Log (Log Source)               | มาตราที่เกี่ยวข้อง (PDPA Article) | เหตุผลและความสอดคล้อง (Compliance Rationale)                                                                                                         |
|-------------------------------------------------|--------------------------------------------|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| การควบคุมการเข้าถึง (Access Control)            | Microsoft Authentication , Google Accounts | มาตรา 37 (1)                      | เป็นการจัดทำมาตรการรักษาความปลอดภัยบนคอมพิวเตอร์ที่เหมาะสม เพื่อป้องกันการสูญหายเข้าถึง ไข่ เปลี่ยนแปลง หรือเปิดเผยข้อมูลโดยไม่พึงปรารถนาจากอำนาจ    |
| การสำรองร่องรอยการใช้งาน (Audit Trail)          | Microsoft SharePoint , GitLab , GitHub     | มาตรา 37 และ มาตรา 39             | เพื่อแสดงความรับผิดชอบ (Accountability) และมีหลักฐานยืนยันว่าใครทำอะไร กับข้อมูลส่วนบุคคลบ้าง รวมถึงช่วยในการจัดทำบันทึกการกิจกรรมการประมวลผล (ROPA) |
| การรักษาความลับของข้อมูล (Data Confidentiality) | SSL/TLS Traffic , DNS , Firewall           | มาตรา 37 (1)                      | การตรวจสอบการเข้ารหัส (Encryption) และช่องทางการสื่อสาร เพื่อมั่นใจว่าข้อมูลส่วนบุคคลจะไม่ถูกดักฟังหรือรั่วไหลระหว่างการส่งผ่านเครือข่าย             |

DEPLOYMENT & APPLIANCE

# Hardware Appliance Architecture · 100% On-Premise

Installed and processed entirely within the organization, unifying the log-management engine and the AI processing in a single appliance under one trademark.

**100% On-Premise**  
Installed and processed entirely within the organization's data center — no Cloud or external dependency

**Local Processing & Storage**  
All logs and data are processed and stored on the appliance — never sent outside the network

**Data Sovereignty**  
Full control over your own data, with no risk of leakage through Cloud services

**Softnix Logger CYBOT Appliance**

- Full functionality — Log Monitor, Monitor, Security Monitor, IT Inventory
- Log storage **1TB – 2TB** · 90-day Archive
- Processing throughput of **7,000 Events / second**
- CYBOT AI Chatbot — an AI Buddy for IT security

Deployment: Softnix LLM

Softnix Private Cloud

Ready On-Premise

Privacy by Design

## SPECIFICATIONS SUMMARY

### For IT Management

Reduce complexity, consolidate multiple systems into one, see risk and system health clearly, and control cost

### For System Admins

Work faster with natural-language commands, cut repetitive tasks, and get built-in remediation guidance

### For SI & Partners

An All-in-One solution ready to present — standards-complete, quick to deploy and hand over
